Oracle 11gR2 enqueue waits

Filed under: $\underline{\text{Oracle}},\underline{\text{Performance}}-\text{Venzi} @ 09:24$

Over 1 and a half year ago I posted the enqueue waits for Oracle 10g. Well, a lot has changed in 11g including the enqueue waits. This is the new list of enqueue waits in 11gR2:

	Over 1 and a half year ago I posted the enqueue waits for Oracle 10g. Well, a lot has changed in 11g including the enqueue waits. This is the new list of enqueue waits in 11gR2:				
Group	Enqueue Type	Description			
Auto BMR	enq: AB - ABMR process initialized	Lock held to ensure that ABMR process is initialized			
Auto BMR	enq: AB - ABMR process start/stop	Lock held to ensure that only one ABMR is started in the cluster			
ASM Disk AU Lock	enq: AD - allocate AU	Synchronizes accesses to a specific ASM disk AU			
ASM Disk AU Lock	enq: AD - deallocate AU	Synchronizes accesses to a specific ASM disk AU			
ASM Disk AU Lock	enq: AD - relocate AU	Synchronizes accesses to a specific ASM disk AU			
Edition Lock	enq: AE - lock	Prevent Dropping an edition in use			
Advisor Framework	enq: AF - task serialization	This enqueue is used to serialize access to an advisor task			
	enq: AG - contention	Synchronizes generation use of a particular workspace			
ASM Enqueue		Block ASM cache freeze			
ASM Enqueue	enq: AM - ASM Amdu Dump	Allow only one AMDU dump when block read failure			
ASM Enqueue	enq: AM - ASM File Destroy	Prevent same file deletion race			
ASM Enqueue ASM Enqueue	enq: AM - ASM Hear	Allow one ASM password file update per cluster at a time Prevents a user from being dropped if it owns any open files			
ASM Enqueue	enq: AM - ASM User enq: AM - ASM cache freeze	Start ASM cache freeze			
ASM Enqueue	enq: AM - ASM cache freeze enq: AM - PST split check	Synchronizes check for Storage (PST) split in disk groups			
•	eng: AM - P31 spirt check eng: AM - background COD				
ASM Enqueue	reservation	Reserve a background COD entry			
ASM Enqueue	eng: AM – client registration	Registers DB instance to ASM client state object hash			
ASM Enqueue	eng: AM – disk offline	Synchronizes disk offlines			
ASM Enqueue	enq: AM - group block	ASM group block			
ASM Enqueue	eng: AM - group use	Client group use			
ASM Enqueue	enq: AM - rollback COD reservation	Reserve a rollback COD entry			
ASM Enqueue	enq: AM - shutdown	Prevent DB instance registration during ASM instance shutdown			
MultiWriter Object Access	enq: AO – contention	Synchornizes access to objects and scalar variables			
Service Operations	enq: AS - service activation	Synchronizes new service activation			
Alter Tablespace	enq: AT – contention	Serializes 'alter tablespace' operations			
Audit index file	enq: AU - audit index file	lock held to operate on the audit index file			
ASM volume locks	enq: AV - AVD client registration	Serialize inst reg and first DG use			
ASM volume locks	enq: AV – add/enable first volume in DG	Serialize taking the AVD DG enqueue			
ASM volume locks	enq: AV – persistent DG number	prevent DG number collisions			
ASM volume locks	enq: AV - volume relocate	Serialize relocating volume extents			
Analytic Workspace	enq: AW - AW generation lock	In-use generation state for a particular workspace			
Analytic Workspace	enq: AW - AW state lock	Row lock synchronization for the AW\$ table			
Analytic Workspace	enq: AW - AW\$ table lock	Global access synchronization to the AW\$ table			
Analytic Workspace	enq: AW - user access for AW	Synchronizes user accesses to a particular workspace			
KSXA Test Affinity Dictionary	enq: AY - contention	Affinity Dictionary test affinity synchronization			
Global Transaction Branch	enq: BB - 2PC across RAC instances	PPC distributed transaction branch across RAC instances			
BLOOM FILTER	enq: BF - PMON Join Filter cleanup	PMON bloom filter recovery			
BLOOM FILTER	enq: BF - allocation contention	Allocate a bloom filter in a parallel statement			
Backup/Restore	enq: BR - file shrink	Lock held to prevent file from decreasing in physical size during RMAN backup			
Backup/Restore		Lock held to serialize file header access during multi-section restore			
Backup/Restore	enq: BR - multi-section restore section	Lock held to serialize section access during multi-section restore			
Backup/Restore	enq: BR - perform autobackup	Lock held to perform a new controlfile autobackup Lock held to allow cleanup from backup mode during an RMAN proxy-copy backup			
Backup/Restore Backup/Restore	enq: BR - proxy-copy enq: BR - request autobackup	Lock held to request controlfile autobackups			
packup/Restore	eng: BR - request autobackup eng: BR - space info datafile hdr				
Backup/Restore	update	Lock held to prevent multiple process to update the headers at the same time			
Calibration	eng: CA - contention	Synchronizes various IO calibration runs			
Controlfile Transaction	eng: CF - contention	Synchronizes accesses to the controlfile			
Cross-Instance Call Invocation	eng: CI - contention				
		Coordinates cross-instance function invocations			
Label Security cache	enq: CL - compare labels	Coordinates cross-instance function invocations Synchronizes accesses to label cache for label comparison			
Label Security cache Label Security cache					
	enq: CL - compare labels	Synchronizes accesses to label cache for label comparison			
Label Security cache	enq: CL – compare labels enq: CL – drop label	Synchronizes accesses to label cache for label comparison Synchronizes accesses to label cache when dropping a label			
Label Security cache ASM Instance Enqueue	enq: CL - compare labels enq: CL - drop label enq: CM - gate enq: CM - instance	Synchronizes accesses to label cache for label comparison Synchronizes accesses to label cache when dropping a label serialize access to instance enqueue			
Label Security cache ASM Instance Enqueue ASM Instance Enqueue KTCN REG enq KTCN REG enq	enq: CL - compare labels enq: CL - drop label enq: CM - gate enq: CM - instance enq: CM - race with init enq: CN - race with reg	Synchronizes accesses to label cache for label comparison Synchronizes accesses to label cache when dropping a label serialize access to instance enqueue indicate ASM diskgroup is mounted during descriptor initialization during transaction commit to see concurrent registrations			
Label Security cache ASM Instance Enqueue ASM Instance Enqueue KTCN REG enq KTCN REG enq KTCN REG enq	enq: CL - compare labels enq: CL - drop label enq: CM - gate enq: CM - instance enq: CN - race with init enq: CN - race with reg enq: CN - race with txn	Synchronizes accesses to label cache for label comparison Synchronizes accesses to label cache when dropping a label serialize access to instance enqueue indicate ASM diskgroup is mounted during descriptor initialization during transaction commit to see concurrent registrations during registration

		Represents an active disk online operation
	enq: DO - disk online recovery	Synchronizes disk onlines and their recovery
	enq: DO - startup of MARK process	Synchronizes startup of MARK process
LDAP Parameter	enq: DP – contention	Synchronizes access to LDAP parameters
	enq: DR – contention	Serializes the active distributed recovery operation
*	enq: DS – contention	Prevents a database suspend during LMON reconfiguration
1 7 1	enq: DT – contention	Serializes changing the default temporary table spaceand user creation
	enq: DV – contention	Synchronizes access to lower-version Diana (PL/SQL intermediate representation)
	enq: DW – contention	Serialize in memory dispenser operations
	enq: DX – contention	Serializes tightly coupled distributed transaction branches
	enq: FA - access file	Synchronizes accesses to open ASM files
	enq: FB – contention	Ensures that only one process can format data blcoks in auto segment space managed tablespaces
	enq: FC - open an ACD thread	LGWR opens an ACD thread
Disk Group Chunk Mount	enq: FC - recover an ACD thread	SMON recovers an ACD thread
	enq: FD - Flashback coordinator	Synchronization
	enq: FD - Flashback logical operations	i ·
	enq: FD - Flashback on/off	Synchronization
	enq: FD - Marker generation	Synchronization
Flashback Database	enq: FD - Restore point create/drop	Synchronization
	enq: FD - Tablespace flashback on/off	Synchronization
	enq: FE – contention	Serializes flashback archive recovery
ACD Relocation Gate Enqueue	enq: FG - FG redo generation enq race	resolve race condition to acquire Disk Group Redo Generation Enqueue
ACD Relocation Gate Enqueue	enq: FG - LGWR redo generation enq	resolve race condition to acquire Disk Group Redo Generation Enqueue
	race	1
	enq: FG - serialize ACD relocate	only 1 process in the cluster may do ACD relocation in a disk group
	enq: FL - Flashback database log	Synchronization
	enq: FL - Flashback db command	Enqueue used to synchronize Flashback Database and and deletion of flashback logs.
11 5	enq: FM - contention	Synchronizes access to global file mapping state
	enq: FP - global fob contention	Synchronizes various File Object(FOB) operations
	enq: FR - contention	begin recovery of disk group
	enq: FR - recover the thread	wait for lock domain detach
	enq: FR - use the thread	indicate this ACD thread is alive
	enq: FS - contention	Enqueue used to synchronize recovery and file operations or synchronize dictionary check
	enq: FT - allow LGWR writes	allow LGWR to generate redo in this thread
Disk Group Redo Generation	enq: FT - disable LGWR writes	prevent LGWR from generating redo in this thread
DBFUS	enq: FU - contention	This enqueue is used to serialize the capture of the DB Feature Usage and High Water Mark Statistics
	eng: FX - issue ACD Xtnt Relocation	
ACD Xtnt Info CIC	cić	ARB relocates ACD extent
ASM Disk Header	enq: HD – contention	Serializes accesses to ASM SGA data structures
Queue Page	eng: HP - contention	Synchronizes accesses to queue pages
	enq: HQ - contention	Synchronizes the creation of new queue IDs
Direct Loader High Water Mark		Lock used to broker the high water mark during parallel inserts
	eng: HW - contention	Lock used to broker the high water mark during parallel inserts
	enq: IA - contention	
	eng: ID - contention	Lock held to prevent other processes from performing controlfile transaction while NID is running
i	eng: IL - contention	Synchronizes accesses to internal label data structures
Kti blr lock	eng: IM - contention for blr	Serializes block recovery for IMU txn
	eng: IR - contention	Synchronizes instance recovery
Instance Recovery	eng: IR - contention2	Synchronizes parallel instance recovery and shutdown immediate
	eng: IS - contention	Enqueue used to synchronize instance state changes
In-Mem Temp Table Meta		
Creation	enq: IT – contention	Synchronizes accesses to a temp object's metadata
	enq: JD – contention	Synchronizes dates between job queue coordinator and slave processes
Ĭ		Lock held during materialized view operations (like refresh, alter) to prevent concurrent operations on the same
Materialized View	enq: JI – contention	materialized view
Job Queue	eng: JQ - contention	Lock to prevent multiple instances from running a single job
	eng: JS - aq sync	Scheduler evt code and AQ sync
	eng: JS - contention	Synchronizes accesses to the job cache
	enq: JS - evt notify	Lock got during event notification
Job Scheduler	enq: JS - evt notny enq: JS - evtsub add	Lock got when adding subscriber to event q
Job Scheduler	enq: JS - evtsub add enq: JS - evtsub drop	Lock got when dropping subscriber to event q
Job Scheduler	enq: JS - evisub drop enq: JS - job recov lock	Lock got when dropping subscriber to event q Lock to recover jobs running on crashed RAC inst
	eng: JS - job recov lock eng: JS - job run lock - synchronize	Lock to recover jobs running on crashed RAC list. Lock to prevent job from running elsewhere
	eng: JS - g mem clnup lck	Lock to prevent job from running eisewhere Lock obtained when cleaning up q memory
ř	eng: JS - q mem chup ick eng: JS - queue lock	Lock obtained when cleaning up q memory Lock on internal scheduler queue
	enq: JS - queue юск enq: JS - sch locl enqs	Scheduler non-global enqueues
Job Scheduler	eng: JS - sch loci engs eng: JS - wdw op	Lock got when doing window open/close
SQL STATEMENT QUEUE	eng: JS - waw op eng: JX - SQL statement queue	statement
	eng: JX - SQL statement queue eng: JX - cleanup of queue	release SQL statement resources
	eng: JX - cleanup of queue eng: KD - determine DBRM master	pelease SQL statement resources Determine DBRM master
	eng: KM - contention	Synchronizes various Resource Manager operations
	enq: KO - fast object checkpoint	Coordinates fast object checkpoint
11	eng: KP - contention	Synchronizes kupp process startup
	enq: KQ - access ASM attribute	Synchronization of ASM cached attributes
Scheduler Plan	enq: KT - contention	Synchronizes accesses to the current Resource Manager plan
	enq: MD - contention	Lock held during materialized view log DDL statements
	enq: MH - contention	Lock used for recovery when setting Mail Host for AQ e-mail notifications
Master Key	enq: MK - contention	changing values in enc\$
AQ Notification Mail Port	enq: ML – contention	Lock used for recovery when setting Mail Port for AQ e-mail notifications
LogMiner	eng: MN - contention	Synchronizes updates to the LogMiner dictionary and prevents multiple instances from preparing the same
		LogMiner session
AABA()NI mootroi-ti	enq: MO - contention	Serialize MMON operations for restricted sessions
		Lock used to coordinate media recovery with other uses of datafiles
Media Recovery	enq: MR – contention	
Media Recovery Media Recovery	enq: MR - standby role transition	Lock used to disallow concurrent standby role transition attempt
Media Recovery Media Recovery Materialized View Refresh Log	enq: MR - standby role transition enq: MS - contention	Lock held during materialized view refresh to setup MV log
Media Recovery Media Recovery Materialized View Refresh Log	enq: MR - standby role transition	Lock held during materialized view refresh to setup MV log Held during online datafile move operation or cleanup
Media Recovery Media Recovery Materialized View Refresh Log Online Datafile Move	enq: MR - standby role transition enq: MS - contention	Lock held during materialized view refresh to setup MV log
Media Recovery Media Recovery Materialized View Refresh Log Online Datafile Move MWIN Schedule	eng: MR - standby role transition eng: MS - contention eng: MV - datafile move	Lock held during materialized view refresh to setup MV log Held during online datafile move operation or cleanup
Media Recovery Media Recovery Materialized View Refresh Log Online Datafile Move MWIN Schedule ksz synch	enq: MR - standby role transition enq: MS - contention enq: MV - datafile move enq: MW - contention	Lock held during materialized view refresh to setup MV log Held during online datafile move operation or cleanup This enqueue is used to serialize the calibration of the manageability schedules with the Maintenance Window
Media Recovery Media Recovery Materialized View Refresh Log Online Datafile Move MWIN Schedule ksz synch Outline Cache	eng: MR – standby role transition eng: MS – contention eng: MV – datafile move eng: MW – contention eng: MX – sync storage server info	Lock held during materialized view refresh to setup MV log Held during online datafile move operation or cleanup This enqueue is used to serialize the calibration of the manageability schedules with the Maintenance Window Lock held to generate a response to the storage server information request when an instance is starting up
Media Recovery Media Recovery Materialized View Refresh Log Online Datafile Move MWIN Schedule ksz synch Outline Cache Online DDLs	enq: MR - standby role transition enq: MS - contention enq: MV - datafile move enq: MW - contention enq: MX - sync storage server info enq: OC - contention	Lock held during materialized view refresh to setup MV log Held during online datafile move operation or cleanup This enqueue is used to serialize the calibration of the manageability schedules with the Maintenance Window Lock held to generate a response to the storage server information request when an instance is starting up Synchronizes write accesses to the outline cache

() API Historiae		
OLAPI Histories	enq: OQ - xsoqhiAlloc	Synchronizes access to olapi history allocation
OLAPI Histories	enq: OQ - xsoqhiClose	Synchronizes access to olapi history closing
OLAPI Histories	enq: OQ - xsoqhiFlush	Synchronizes access to olapi history flushing
OLAPI Histories	enq: OQ - xsoqhistrecb	Synchronizes access to olapi history globals
Encryption Wallet Encryption Wallet	enq: OW - initialization enq: OW - termination	initializing the wallet context terminate the wallet context
Property Lock	enq: OW - termination enq: PD - contention	Prevents others from updating the same property
Parameter	enq: PE - contention	Synchronizes system parameter updates
Password File	eng: PF - contention	Synchronizes accesses to the password file
Global Parameter	enq: PG - contention	Synchronizes global system parameter updates
AQ Notification Proxy	eng: PH - contention	Lock used for recovery when setting Proxy for AQ HTTP notifications
Remote PX Process Spawn		
Status	enq: PI – contention	Communicates remote Parallel Execution Server Process creation status
Transportable Tablespace	enq: PL - contention	Coordinates plug-in operation of transportable tablespaces
Process Startup	enq: PR - contention	Synchronizes process startup
PX Process Reservation	enq: PS - contention	Parallel Execution Server Process reservation and synchronization
ASM Partnership and Status	eng: PT - contention	Synchronizes access to ASM PST metadata
Table		1 2
KSV slave startup	enq: PV - syncshut	Synchronizes instance shutdown_slvstart
KSV slave startup	enq: PV - syncstart	Synchronizes slave start_shutdown
Buffer Cache PreWarm	enq: PW - flush prewarm buffers	Direct Load needs to flush prewarmed buffers if DBWR 0 holds enqueue
Buffer Cache PreWarm	enq: PW - perwarm status in dbw0	DBWR 0 holds enqueue indicating prewarmed buffers present in cache
ASM Rollback Recovery	enq: RB - contention	Serializes ASM rollback recovery operations
Result Cache: Enqueue	enq: RC - Result Cache: Contention	Coordinates access to a result-set
RAC Load	enq: RD - RAC load	update RAC load info
Block Repair/Resilvering	enq: RE - block repair contention	Synchronize block repair/resilvering operations
Data Guard Broker	enq: RF - DG Broker Current File ID eng: RF - FSFO Observer Heartbeat	Identifies which configuration metadata file is current
Data Guard Broker		Captures recent Fast-Start Failover Observer heartbeat information
Data Guard Broker	enq: RF - RF - Database Automatic Disable	Means for detecting when database is being automatically disabled
Data Guard Broker	enq: RF - atomicity	Ensures atomicity of log transport setup
Data Guard Broker	eng: RF - new AI	Synchronizes selection of the new apply instance
Data Guard Broker	eng: RF - synch: DG Broker metadata	Ensures r/w atomicity of DG configuration metadata
Data Guard Broker	enq: RF - synchronization: aifo master	Synchronizes apply instance failure detection and failover operation
Data Guard Broker	enq: RF - synchronization: and master	Synchronizes critical apply instance among primary instances
wallet set mkey	eng: RK - set key	wallet master key rekey
RAC Encryption Wallet Lock	eng: RL - RAC wallet lock	RAC wallet lock
Redo Log Nab Computation	enq: RN - contention	Coordinates nab computations of online logs during recovery
Multiple Object Reuse	eng: RO - contention	Coordinates flushing of multiple objects
Multiple Object Reuse	eng: RO - fast object reuse	Coordinates fast object reuse
Resilver / Repair	eng: RP - contention	Enqueue held when resilvering is needed or when datablock is repaired from mirror
Workload Capture and Replay	eng: RR - contention	Concurrent invocation of DBMS_WORKLOAD * package API
Reclaimable Space	eng: RS - file delete	Lock held to prevent file from accessing during space reclaimation
Reclaimable Space	eng: RS - persist alert level	Lock held to make alert level persistent
Reclaimable Space	enq: RS - prevent aging list update	Lock held to prevent aging list update
Reclaimable Space	enq: RS - prevent file delete	Lock held to prevent deleting file to reclaim space
Reclaimable Space	enq: RS - read alert level	Lock held to read alert level
Reclaimable Space	enq: RS - record reuse	Lock held to prevent file from accessing while reusing circular record
Reclaimable Space	enq: RS - write alert level	Lock held to write alert level
Redo Thread	enq: RT - contention	Thread locks held by LGWR, DBW0, and RVWR to indicate mounted or open status
Redo Thread	enq: RT - thread internal	Thread locks held by CKPT to synchronize thread enable and disable
Redo Tilledd	enable/disable	Thread locks field by CKFT to synchronize thread enable and disable
Rolling Migration	enq: RU – contention	Serializes rolling migration operations
Rolling Migration	enq: RU - contention enq: RU - waiting	Results of rolling migration CIC
Rolling Migration Materialized View Flags	enq: RU - contention enq: RU - waiting enq: RW - MV metadata contention	Results of rolling migration CIC Lock held by CREATE/ALTER/DROP materialized viewwhile updating materialized view flags in detail tables
Rolling Migration Materialized View Flags ASM Extent Relocation Lock	enq: RU - contention enq: RU - waiting enq: RW - MV metadata contention enq: RX - relocate extent	Results of rolling migration CIC Lock held by CREATE/ALTER/DROP materialized viewwhile updating materialized view flags in detail tables Synchronizes relocating ASM extents
Rolling Migration Materialized View Flags ASM Extent Relocation Lock LogicalStandby	enq: RU - contention enq: RU - waiting enq: RW - MV metadata contention enq: RX - relocate extent enq: SB - contention	Results of rolling migration CIC Lock held by CREATE/ALTER/DROP materialized viewwhile updating materialized view flags in detail tables Synchronizes relocating ASM extents Synchronizes Logical Standby metadata operations
Rolling Migration Materialized View Flags ASM Extent Relocation Lock LogicalStandby Session Migration	enq: RU - contention enq: RU - waiting enq: RW - MV metadata contention enq: RX - relocate extent enq: SB - contention enq: SE - contention	Results of rolling migration CIC Lock held by CREATE/ALTER/DROP materialized viewwhile updating materialized view flags in detail tables Synchronizes relocating ASM extents Synchronizes Logical Standby metadata operations Synchronizes transparent session migration operations

Oracle 11gR2 enqueue waits | Venzi's Tech-Blog

Temp Object	enq: TO - contention	Synchronizes DDL and DML operations on a temp object
		Lock held during purge and dynamic reconfiguration of fixed tables.
		TM access to the gueue table
	eng: TQ - DDL contention eng: TQ - DDL-INI contention	Streams DDL on queue table
	eng: TQ - DDL-INI contention	TM access to the queue table
		TM access to the queue table
	1 1	•
		Serializes accesses to temp segments
	enq: TT - contention	Serializes DDL operations on tablespaces
	enq: TW - contention	Lock held by one instance to wait for transactions on all instances to finish
	1	Allocating an ITL entry in order to begin a transaction
	enq: TX - contention	Lock held by a transaction to allow other transactions to wait for it
	enq: TX - index contention	Lock held on an index during a split to prevent other operations on it
	enq: TX - row lock contention	Lock held on a particular row by a transaction to prevent other transactions from modifying it
	enq: UL – contention	Lock used by user applications
	enq: US – contention	Lock held to perform DDL on the undo segment
	enq: WA – contention	Lock used for recovery when setting Watermark for memory usage in AQ notifications
	enq: WF - contention	This enqueue is used to serialize the flushing of snapshots
Write gather local enqueue	enq: WG - delete fso	acquire lobid local enqueue when deleting fso
Write gather local enqueue	enq: WG - lock fso	acquire lobid local enqueue when locking fso
Being Written Redo Log	enq: WL - RAC-wide SGA contention	Serialize access to RAC-wide SGA
Being Written Redo Log	enq: WL - RFS global state contention	Serialize access to RFS global state
Being Written Redo Log	enq: WL - Test access/locking	Testing redo transport access/locking
Being Written Redo Log	enq: WL - contention	Coordinates access to redo log files and archive logs
WLM Plan Operations	enq: WM - WLM Plan activation	Synchronizes new WLM Plan activation
AWR Purge	enq: WP - contention	This enqueue handles concurrency between purging and baselines
LNS archiving log	enq: WR - contention	Coordinates access to logs by Async LNS and ARCH/FG
XDB Configuration	enq: XC - XDB Configuration	Lock obtained when incrementing XDB configuration version number
Auto Online Exadata disks	enq: XD - ASM disk drop/add	Serialize Auto Drop/Add Exadata disk operations
AQ Notification No-Proxy	eng: XH - contention	Lock used for recovery when setting No Proxy Domains for AQ HTTP notifications
ASM Extent Fault Lock	eng: XL - fault extent map	Keep multiple processes from faulting in the same extent chunk
ASM Extent Relocation Enqueue	eng: XQ - purification	wait for relocation before doing block purification
ASM Extent Relocation Enqueue eng: XQ - recovery		prevent relocation during recovery asserts checking
ASM Extent Relocation Enqueue	eng: XQ - relocation	wait for recovery before doing relocation
Quiesce / Force Logging	eng: XR - database force logging	Lock held during database force logging mode
	eng: XR - quiesce database	Lock held during database quiesce
	eng: XY - contention	Lock used for internal testing
		lock held to add partition to std audit table
		lock held to add partition to fga audit table
	eng: ZG - contention	Coordinates file group operations
Compression Analyzer	enq: ZH - compression analysis	Synchronizes analysis and insert into compression\$, prevents multiple threads analyzing the same table during a load

For those who made it all to the bottom here a little extra:

While I just found the enqueue waits for 10g on the internet I managed to find out how to retrieve that information. And believe it or not - it's available just over a simple query:

- 1 SELECT eq_name "Group", ev.name "Enqueue Type", eq.req_description "Description"
 2 FROM Yeonqueue_statistics eq, vSevent_name ev
 3 MMERE eq.event#=ev.event#
 4 ORDER By ev.name;

Very nicely done.

Thanks for the post.

Amazingly enough, we have an instance going crazy on CO enqueue failures. I gather this means the PQO needs a bit of slapping around, but...we shall see....let the digging commence! Comment by Ross — 10 February 2011 @ $\underline{07:50}$ | Reply

Outstanding! I stumbled across this today while searching for the definition of one of the enques (output from snapper). Using your query I wrote a quick PL/SQL block to output the definitions as a JavaScript associative array and I've now added to my AWR Formatter: http://tylermuth.wordpress.com/2011/04/20/awr-formatter/

So, all of these events are linked to their definitions when viewing an AWR now.

Regards,

Tyler

Comment by Tyler Muth -28 April 2011 @ $\underline{16:24}$ | Reply

Glad that it helped you Tyler! Btw: You don't wanna port your AWR formatter to FireFox, do you?! 🥹

Oracle 11gR2 enqueue waits | Venzi's Tech-Blog

Comment by Venzi — 28 April 2011 @ $\underline{17:34}$ | Reply

This is very attention-grabbing, You are an overly skilled blogger. I have joined your feed and look forward to in the hunt for extra of your excellent post. Also, I have shared your

Comment by text check — 31 December 2011 @ 14:00 | Reply

Slightly tidier output for your query:

SET LINES 200 COL group_name FORMAT A32 HEADING "Group"
COL name FORMAT A41 HEADING "Enqueue Type"
COL description FORMAT a120 HEADING "Description" SELECT eq_name group_name, ev.name name, eq.req_description description FROM v\$enqueue_statistics eq, v\$event_name ev WHERE eq.event#=ev.event#
ORDER BY ev.name
